BALLOON, PORTABLE
HYDROGEN GENERATOR

June 12, 1958

CONFIDENTIAL

Dear Sir:

This letter report describes the activity under Task Order No. C during May, 1958.

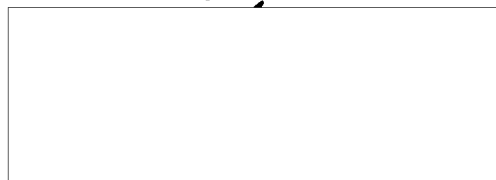

No additional small-generator runs were conducted. Since the next group of runs is to be at an initial temperature of 60-65 F, preparations are being made to provide for heating the water pool surrounding the experimental generator. This will probably be accomplished by means of a steam line or electrical heaters immersed in the pool.

The experimental full-scale generator was received on May 15. The unit, as shipped to us, had been folded in a bundle 15 x 24 x 34 inches and weighed approximately 38 pounds.

During June, it is contemplated that the next series of small-scale runs will be started.

The total appropriation on this Task Order was \$39,375. As of June 1, 1958, the unexpended balance was approximately \$1,450.

Sincerely,

ABW:tr
